The ***Bulletin of Alloy Phase Diagrams,*** published quarterly by American Society for Metals, is a vital resource for any professional needing accurate and up-to-date phase diagram information. Phase diagrams are graphic displays of the thermodynamic relationships of two or more elements at different temperatures and compositions. In addition to providing critical evaluations of 15 to 20 phase diagrams, prepared by international authorities, each issue contains a section on recent literature, a calendar of events, news concerning phase diagram determination and evaluation, feature articles, and examples of how phase diagrams are used.

As an essential part of the International Data Program for Alloy Phase Diagrams, jointly sponsored by American Society for Metals and the National Bureau of Standards, the *Bulletin* constitutes a central information source for phase diagram data—a landmark in technical publishing. The ***Bulletin of Alloy Phase Diagrams*** provides you with the most reliable phase diagram data available anywhere. Subscribe now by filling out and mailing the subscription order form.
